Genes with similarity to proteins in the databases are described in
'product' or 'note 'qualifiers. Genes that have no significant
product' or 'note 'qualifiers. Genes that have no significant
protein similarity are described as 'unknown protein'.

The software programs used to predict genes include: Grail
(Informatics Group, Oak Ridge National Laboratory,
GENSCAN (Chris Burge, MIT, http://CCR-081.mit.edu/GENSCAN.html),
NetGene2 (S.M. Hebsgaard, et al., CBS, Technical University of
Denmark, http://www.cbs.dtu.dk/services/NetGene2/) and
SplicePredictor (Volker Brendel, Stanford University,
http://gremlinl.zool.iastate.edu/cgi-bin/sp.cgi).
                                                                                                                                                                                                                                                                                                                                                                                                                                         Genes encoding tRNAs are predicted by tRNAscan_SE (Seam Eddy, Washington University School of Medicine, St. Louis, http://genome.wustl.edu/eddy/tRNAscan_SE).

```
current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.

Exceptions are indicated by an explicit note.

IMPORTANT: This sequence is not the entire insert of clone C49FB. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

The true left end of clone C49FB is at 1 in this sequence. The true left end of clone F02Cl2 is at 39332 in this sequence. The true left end of clone F46Gl0 is at 1490 in this sequence. The start of this sequence (1. .1490) overlaps with the end of sequence 250177. The end of this sequence (39332. .39435) overlaps with the start of sequence 251269.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AQLSQYPQQANIIAQSTNPAQLDGLIALNNDAILALIGSFQSYSPSLLDSAPGTPPSG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          IMPORTANT: This sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SSQGKAIEDLTRKNELLEERLLERESSGSPSSSRLPALAVSSSQMQLTMPIIPQMQNI

## ALIGNMENTS

```
AAH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. (II) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the soft action of vectors on taining them which are used to produce hosts cells which express the polypeptides. The polypeptides (II) via the production of vectors polypeptides and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to AAH55091 represent specifically claimed S. epidermidis genomic DNA AAH55091 to Polymucleotide sequences from the present invention. AAH55091 to AAH55098 represent oligonucleotide sequences and primers which are used in man and primers which are used to the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              in the exemplification of the present invention.

N.B. The present invention specifically claims all the polynucleotide sequences given in the sequence listing of the present specification, however the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4465 to 4472,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        627 atttaagtgattatcttagtatagaaaatgcctgagacaatgattgtcccaggcatttta 686
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                160 ttttgcgcgatcggacggctgagttgatctggcgccaaaaacctctgctaagtcccgtgc 219
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0; Gaps

AMES 304 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis.

(I) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the polypeptides. The polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the pulypeptides may also be used to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAH33971 to AAH55090 represent specifically claimed S. epidermidis genomic DNA polymoclectide sequences and primers which are used in the exemplification of the present invention. AAH55091 to AAH55099 represent oilygonuclectide sequences and primers which are used in the exemplification of the present invention.

CN.B. The present invention specifically claims all the polymoclectide exequences is given in the sequence listing of the present specification. Chowever the sequence listing only goes up to SEQ ID NO:4454 so even consequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               160 ttttgcgcgatcggacggctgagttgatctggcgccaaaaacctctgctaagtcccgtgc 219
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0; Gaps

AAH55304 to AAH53970 represent nucleic acids (I) encoding polypeptides CC (II), given in AAG81454 to AAG81120, from Staphylococcus epidermidis. CC (II) and (II) can have antibacterial activity and therefore can be used to recination. The nucleic acids (I) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the coordinate subjects and to raise antibodies against then be polypeptides may also be used to assay for other inhibitors of their The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the AAB5509 represent specifically claimed S. epidermidis genomic DNA AAB5509 represent specifically claimed S. epidermidis genomic DNA AAB5509 represent oligonucleotide sequences and primers which are used in the exemplification of the present invention. AAB5509 to sequence listing of the present specifically claims all the polynucleotide sequence listing of the present specification, chowever the sequence listing of the present specification, however the sequence listing of the present specification, however the sequence listing of the present specification, chowever the sequence listing of the present specification, however the sequences are given in the disclosure for SEQ ID NO:4454 so even though sequences are present for SEQ ID NO:4455 to 4472, on sequences are present for SEQ ID NO:4455 to 4472,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2590 atttaagigattatettagtatagaaaatgeetgagacaatgattgteeeaggeatttta 2649

AAH55204 to AAH53970 represent nucleic acids (I) encoding polypeptides CC (II), given in AAG81454 to AAG81120, from Staphylococcus epidermidis. CI ) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the coordance onlypeptides (II) via the production of vectors to solypeptides (II) (and/or nucleic acids) may then be colypeptides may also be used to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their crap polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the cramment of S. epidermidis infections, e.g. endocarditis. AAH55091 to polynucleotide sequences from the present invention. AAH55091 to polynucleotide sequences and primers which are used the present invention of the present invention. AAH55091 to sequence listing of the present specification, sequence listing of the present specification, sequence listing of the present specification. And sequence listing of the present specification, sequence listing of the present specification, however the sequence listing only goes up to SEQ ID NO:4465 to 4472, consequences are present for SEQ ID NO:4465 to 4472, consequences are present for SEQ ID NO:4465 to 4472, consequences are present for SEQ ID NO:4465 to 4472, consequences are present for SEQ ID NO:4465 to 4472, consequences are present for SEQ ID NO:4465 to 4472, consequences are present for SEQ ID NO:4465 to 4472, consequences are present for SEQ ID NO:4465 to 4472, consequences are present for SEQ ID NO:4465 to 4472, consequences are present for SEQ ID NO:4465 to 4472, consequences are present for SEQ ID NO:4465 to 4472, consequences are present for SEQ ID NO:4465 to 4472, consequences are present for SEQ ID NO:4465 to 4472, consequences are present specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           381 atttaagtgattatettagtatagaaaatgeetgagaeaatgattgteeeaggeatttta 440

The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, wycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AA199683) and H37Rv (AA199682). The method is useful for evaluating strain variation of tuberculosis and has valuable application in the fields of tuberculosis genetics, epidemiology, patient treatment and epidemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, cytokine, cell proliferation, cell differentiation; gene therapy; vaccine, peptide therapy, stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 4411529 BP; 758565 A; 1449983 C; 1444602 G; 758379 T; 0 other;
                                                                                       Evaluating strain variation of Mycobacterium tuberculosis, comprises determining the nucleotide sequence of the strain at positions in the genome corresponding to positions where M. tuberculosis strains CDC

The invention relates to human polynucleotides (AA179941-AA193841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine. cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or e.g. stem cell growth factor activity, hematopoiesis regulating activity itssue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                       Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

```
This invention describes a coconut foliar decay virus (CFDV) DNA fragment that includes the stem-loop structure of CFDV DNA but lacks the translation start codons of open reading frames ORF1 and/Or ORF2. The new CFDV DNA fragment is useful as a bacterial or yeast promoter, as a promoter for tissue-specific (especially phloem-specific) gene expression in plants and for production of chimeric constructs for translent or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .

49 human secreted proteins AAB32050. The genes can be used to generate fusion proteins by linking to the gene for the human content fusion proteins by linking to the gene for the human common debuling Fr portion (SEQIDI) for increasing the stability of the fusion protein as compared to the human protein only. The genes and proteins are useful for preventing, ameliorating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and concer, and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune colliss, remunential and ulcerative colliss; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fundal

The sequences given in AAQ47709-10 represent embryo and liver derived human transforming growth factor-beta (TGF-beta) genes repectively. The proteins encoded by these sequences may be used in a pharmaceutical composition for the treatment of various bone, cartilage or tooth defects and in tissue and wound repair processes. These proteins may also be used as immunosuperssors in organ transplants and in cosmetic surgery. Antibodies raised against these proteins may be

The zdintl polypeptide is useful in modulating cell-cell interactions of cells derived from tissues of heart, brain, spinal cord and skeletal muscle. It is useful in treating and diagnosing chondro sacroma, atherosclerosis, Alzheimer's disease, restenosis, ischemic reperfusion, obesity, intimal hyperplasia and tumors of heart, brain, and spinal cord. The zdintl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a degenerate sequence which encodes a human disintegrin homologue, designated zdintl. The zdintl polypeptide is a cardiac myocyte proliferation and differentiation stimulator, as well as an adipocyte proliferation and differentiation inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polypeptide is also useful in identifying its new family members, antagonists, agonists and antibodies. Antagonists, antibodies and fusion proteins of zdintl are useful in inhibiting platelet aggregation, apoptosis, neurogenesis and myogenesis. Agonists and antagonists are

Disintegrins bind cell surface molecules, including integrins, on the surface of various cells surface molecules, including fibroblasts, tumour, endothelial, muscle, neuronal, bone and sperm cells. Disintegrins are unique and potentially useful tools for investigating cell matrix and cell-cell interactions, apoptosis, neurogenesis, connective tissue disorders, chondrogenesis, arthritis, tumour proliferation, ischaemia reperfusion and inflammation. Additionally, they tumour cells and have antianglogenic activity. The present sequence is a degenerate DNA sequence representing all DNAs that encode human disintegrin, zdintl, the gene for which is located on

Amplification products were subcloned and sequenced, one clone (designated pSK-MP121) was found to contain a new sequence. Part of the insert from this clone was used to re-screen the human liver cDNA library and a 2722 bp fragment (i.e. the present sequence) coding for a TGF-beta-like protein was isolated. The protein encoded by the cDNA insert has mitogenic and differentiation-inducing properties making it (or fusion proteins comprising it or heterodianers of the protein with a cystine knot motif protein) useful for inducing tissue regeneration.
                                                                                                                                 gettgeagtgeacgeaaccactttceacgteaccaatceaggtgagtagettgetggaga 124

Also described are: (1) nucleic acid (II) encoding (II): (2) expression vector (III) containing (III) in a suitable vector system; (3) host cell (IV) containing (III) and (4) a pharmaceutical composition (V) containing (II), producing (I): and (4) a pharmaceutical composition (V) containing (I), neuroprotective, antiinfertility and osteopathic activities, and can be used in gene therapy. (V) is useful for the prevention or therapy of diseases for which also the dimeric form of the protein would be indicated. Diseases treatable include diseases associated with bone and/or cartilage damage or affecting bone and/or cartilage disease or situations in which cartilage and/or bone growth is desirable, for spinal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /note= "transforming growth factor (TGF)-beta monomeric

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   228,

- Getermination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila malanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswall Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Unpublished (2000)

electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for amplicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0;
